PERSONAL PROJECTS

Telegram bot

- I made use of the "telepot" module to connect to the telegram api. The bot registers and saves the: email address of the user, twitter username, telegram username, facebook url, user ethereum address into a database. It allows for editing of previous entries. It creates a referral system. Export the data into a csv file.

School Website and Blog Interface

- It has the usual school website pages like the Home, Executives, About, Gallery, Event, a Blog and an Alumni page. The blog interface has an admin page where you can publish your articles. It has a comment and tagging system. The Alumni webpage also has a blogging system and a forum webpage.

Django and React Application

- It is a Todo Application that shows the complete and incomplete task. It allows for editing and deleting of task that has already been completed. The React Application uses the "axios" library to connect to the backend Django Application.

ACHIEVEMENTS

Received awards (05/2020 - 06/2020)

Identified a problem and solved it (07/2019 - Present)
